SUMMARY

Full-stack software engineer, 4 years building production **web applications** in **C# / .NET, Java / Spring Boot**, and **SQL Server / PostgreSQL**, with **React / TypeScript** front ends — mostly replacing legacy systems a university runs on daily.

EXPERIENCE

Louisiana State University - Information Technology Services

Software Engineer (Application Developer II) — promoted Feb. 2026

Baton Rouge, LA

May 2023 - Present

- **Course Offerings site.** Built LSU's public course catalog in **.NET** with the University Registrar, retiring a legacy system; now serves **4.5K+ monthly users**. Designed its many-to-many **SQL Server** schema and tuned indexing with DBAs
- **Mainframe migration lead.** Led LSU's DB2 mainframe decommissioning: designed the cutover with a parallel-run rollback and migrated **164 SQL views and stored procedures** across three production apps. Wrote the playbook two engineers used to migrate two more
- **Shared platform code.** Built the Azure AD impersonation feature in **LsuInfrastructureMVC**, the internal .NET package LSU's web apps depend on, then rolled the new version out and regression tested it across dependent applications
- **Workday Extend app.** Built a course-certification web app for faculty, one of the first LSU put into production, and retired the legacy system behind it. Later added an assessment component admins configure without a deploy
- **CKEditor 5 rewrite.** Ported all **8** custom JavaScript/TypeScript editor plugins to CKEditor 5 for LSU's knowledge base (**70K monthly visitors**) with zero feature regressions, and made the full suite keyboard accessible (WCAG)
- **PHP to .NET 10.** Rewrote a PHP inventory app in **.NET 10 / ASP.NET Core** with xUnit coverage, and moved LSU's campus-wide software distribution platform onto Azure AD / Entra ID SSO with SP-initiated **SAML Single Logout**
- **Java and Spring Boot.** Diagnosed a Tomcat 10 caching regression slowing every Spring app on the platform and shipped the fix, and patched an Apache Struts CVE across 10 Java apps
- **Product ownership.** Run requirements sessions and demos with the Registrar, Procurement, and academic offices; drive UAT through dev/QA/prod gates and schedule releases around course, inventory, and budget cycles
- **Production support.** Root-cause and fix authentication, data, and session bugs across **25+ enterprise web systems**, and regression test every quarterly platform release

Student Developer, LSU ITS (part-time)

Nov. 2021 - May 2023

- Built the TigerCard Photo **REST API** and implemented **Spring OAuth2** authentication for campus **Java** applications

Tyson Foods IT

Tech@Tyson Intern

Springdale, AR

May 2022 - Aug. 2022

- Automated a time-sensitive process for the Emerging Technology team, saving them **2+ hours a week**, and built reusable **GitLab CI/CD** pipeline templates with **Docker** for the team's build and deploy workflow

PROJECTS

MusiQL | *React, TypeScript, Vite, .NET 10, PostgreSQL 17, Docker*

github.com/TrevorHuval/musiql

- A **full-stack web app** where a playlist is a saved query instead of a fixed list. Designed **MQL**, a small query language that gets parsed to an AST, checked against a whitelisted schema, and compiled down to parameterized SQL
- Catalog ETL rebuilds millions of rows with **no downtime**; Spotify OAuth exports playlists to users' accounts

Plannit | *.NET 10, ASP.NET Core MVC, EF Core, Dapper, PostgreSQL/SQLite, Docker*

github.com/TrevorHuval/Plannit

- Self-hosted personal finance app: every query owner-scoped at the data-access layer, duplicate-safe bank-statement imports, a retirement projection engine, and **230+ automated tests**. Drove **CodeQL to zero alerts** by fixing real XSS, ReDoS, and path-traversal issues

Heardit | *ASP.NET Core 10, PostgreSQL, EF Core, xUnit, Docker Compose*

github.com/TrevorHuval/Heardit

- Letterboxd for music: ratings, follows, and a listen-later queue, with feed queries batched to avoid **N+1** reads

TECHNICAL SKILLS

Languages: C#, TypeScript, JavaScript, SQL, Java, Python, PHP, C, C++, HTML, CSS

Frontend: React, Vite, TypeScript, HTML, CSS, Bootstrap, webpack, CKEditor 5, WCAG accessibility

Backend: .NET 10 / ASP.NET Core, Java / Spring Boot, REST APIs, Entity Framework Core, Dapper, Workday Extend

Databases: PostgreSQL, SQL Server, T-SQL, DB2, schema design, indexing & query optimization, ETL

Cloud & DevOps: Docker, CI/CD (GitLab), Git, AWS, Azure AD / Entra ID, SAML, OAuth 2.0, AI-assisted dev (Claude)

Practices: Root-cause analysis, unit & integration testing, code review, UAT & release management, Agile/Scrum

EDUCATION

Louisiana State University - Bachelor of Science in Computer Science, GPA: 3.7

Baton Rouge, LA | May 2023
