SUMMARY

Full-stack software engineer with **3+ years** shipping .NET and Java web applications across 25+ campus systems at LSU, with **React/TypeScript** and PostgreSQL projects deployed to **AWS** via CI/CD.

EXPERIENCE

Louisiana State University - Information Technology Services

Baton Rouge, LA

Software Engineer (Application Developer II) — promoted Feb. 2026

May 2023 - Present

- Built and own LSU's public **.NET/SQL Server course browser (4.5K+ monthly users)** as sole developer, from Registrar mockups to production. Enabled complete schedules with a many-to-many data model and multiple meeting times; traced stale schedules to untracked ETL deletions and added active-record filtering.
- Migrated **budget, inventory, and procurement applications off DB2**, converting **164 SQL views and stored procedures**, forms, workflows, and identity mappings to Workday-sourced data and Azure AD. Took all three through testing and production cutover; mentored two engineers through migrating two more apps.
- Migrated campus software distribution to **Entra ID SSO**, implementing **SAML logout** from OWIN claims. Built Azure AD impersonation into LSU's shared .NET library and deployed it across dependent apps.
- Replaced a legacy faculty-certification app with **Workday Extend** request and approval workflows. Made assessment modes and answer choices admin-configurable, eliminating code changes for those updates.
- Rebuilt **8 JavaScript/TypeScript plugins for CKEditor 5** for LSU's knowledge base (**70K monthly visitors**), preserving image browsing and content embedding. Added keyboard navigation and repaired the Firefox accessibility checker.
- Restored inventory exports above **50,000 rows** by replacing failing OpenXML generation with CSV. Fixed expired-session handling that left asset scanners on a blank screen, and deployed the correction.
- Fixed slow off-campus responses and failed image uploads in a **Java/Spring** reservations app (caching, multipart handling) and shipped the hotfix; remediated a **Struts CVE across 10 Java apps** in staged deployments.

Student Developer, LSU ITS (part-time)

Nov. 2021 - May 2023

- Implemented **Spring OAuth2** authentication for campus Java applications and integrated the TigerCard Photo API.

Tyson Foods IT

Springdale, AR

Tech@Tyson Intern

May 2022 - Aug. 2022

- Built reusable **GitLab CI/CD templates with Docker** and automated a recurring task, saving the Emerging Technology team **2+ hours weekly**.

PROJECTS

MusiQL | *React, TypeScript, .NET, PostgreSQL, Docker, xUnit/Vitest*

trevorhuval.com/musiql | GitHub

- Built a **React/TypeScript playlist builder and .NET API** so users query music without SQL. Designed MQL with schema validation and **parameterized SQL** compilation.
- Kept the existing catalog available during ETL rebuilds using staging tables and a **transactional swap**. Integrated **Spotify OAuth (PKCE)** so users export playlists to their own account. Ships via **GitHub Actions CI/CD** as multi-arch Docker images to AWS EC2.

Plannit | *.NET, ASP.NET Core MVC, EF Core, SQLite, Docker*

trevorhuval.com/plannit | GitHub

- Built deterministic and **1,000-run Monte Carlo** retirement projections and **hash-based import deduplication** for a personal finance app. Enforced user isolation in EF Core and services, with **two-user integration tests** covering unauthorized reads, updates, and deletes. **CodeQL** clean; deployed on AWS EC2 behind Caddy TLS.

TECHNICAL SKILLS

Languages: C#, Java, TypeScript, JavaScript, SQL, Python, PHP

Web: ASP.NET Core, Spring Boot, React, REST APIs, HTML/CSS, Entity Framework Core, Dapper

Data & Platforms: SQL Server, PostgreSQL, SQLite, ETL, AWS EC2, Workday Extend, Azure AD / Entra ID

Tools & Testing: Docker, GitHub Actions, GitLab CI, xUnit, Vitest, CodeQL, SAML, OAuth 2.0, WCAG testing

EDUCATION

Louisiana State University - Bachelor of Science in Computer Science, GPA: 3.7

Baton Rouge, LA | May 2023
